Weekly Sentiment Report April 3, 2020

Growth

Weekly Sentiment Report April 3, 2020

Growth

The Relative Strength Index (RSI) readings oscillate on a scale between 0 and 100. A reading between 70 and 80 warns of an overbought condition and is likely to encounter a downward correction. Readings between 30 and 20 are considered an oversold condition, and warns of an imminent upward correction. More significant warnings of reversal occurs amidst a divergence or convergence between price and RSI. Yields are interpreted inversely from prices, over 70 is oversold and under 30 overbought. Previous days' closing prices are used in determining RSI components. The RSI formula is: $RSI = 100 - [100 / (1 + Avg\ Up / Avg\ Down)]$ Where: Average Up = the average of all day-on-day changes when the security closed up for the day during the period and Average Down = the average of all down changes for the period. The RSI score is for a security over an N-Day period.

The Relative Strength Index (RSI) readings oscillate on a scale between 0 and 100. A reading between 70 and 80 warns of an overbought condition and is likely to encounter a downward correction. Readings between 30 and 20 are considered an oversold condition, and warns of an imminent upward correction. More significant warnings of reversal occurs amidst a divergence or convergence between price and RSI. Yields are interpreted inversely from prices, over 70 is oversold and under 30 overbought. Previous days' closing prices are used in determining RSI components. The RSI formula is: $RSI = 100 - [100 / (1 + Avg\ Up / Avg\ Down)]$ Where: Average Up = the average of all day-on-day changes when the security closed up for the day during the period and Average Down = the average of all down changes for the period. The RSI score is for a security over an N-Day period.

More significant warnings of reversal occurs amidst a divergence or convergence between price and RSI. Yields are interpreted inversely from prices, over 70 is oversold and under 30 overbought. Previous days' closing prices are used in determining RSI components. The RSI formula is: $RSI = 100 - [100 / (1 + Avg\ Up / Avg\ Down)]$ Where: Average Up = the average of all day-on-day changes when the security closed up for the day during the period and Average Down = the average of all down changes for the period. The RSI score is for a security over an N-Day period.
